Spring Design Ships ScreenShare® App Based on its Patented App Architecture

Free Android App Enables Wireless Sharing of Phone-based Personal Content from Phone to Any Authorized Tablets

Fremont, CA, Oct 23, 2013 – Spring Design today announced a new upgrade to its ScreenShare® app that can enable instant streaming and wireless sharing of video, music, photos, web pages and many types of documents from your phone to your tablets or any friend's tablets. These dual-screen apps can also support phone remote control for content consumption. The app serves as a reference implementation to promote the patented ScreenShare App Architecture and software development tools (SDK).

For Android tablets with ability to support audio/video systems connected through HDMI or audio port, each of the apps can also execute remote controls on A/V systems through the tablet.

 "The ScreenShare app architecture can facilitate rapid local search of new content on the phone, yet offer an immersive user experience to consume the phone-based content on the tablets today and other devices we try to enable in the future. We like to work with partners with our patented tools and reference apps to bring new usage models with tablet to tablet, phone to phone and one device to many devices." said Spring Design CEO, Albert Teng.

FUTURE PLAN

Spring Design is open to license its patented IP and associated development tools and apps to interested parties to support their products incorporating the ScreenShare app architecture.

Find the free version with the new product name, ScreenShare (phone) that pairs with its free tablet sister app: the free version ScreenShare (Tablet) on Google Play
